

Insight: Why Different Regions Garner Differing Valuation Ranges

Valuations for gaming companies are based on many different factors however there are several key indicators that are more significant in determining value. These factors include size and scale, exclusivity and operating history and regulatory environment. To illustrate the differences of how gaming companies are valued, we categorized gaming companies by geographic locale as follows:

I. International and Asian Operators

- Markets include Las Vegas and Macau
- More stable because they attract a wealthier demographic from larger distances
- Casino infrastructure in LV and Macau tend to be larger, creating barriers for new competitors
- Operators tend to be larger and better capitalized
- Valuations tend to be the highest at 10.0x-14.0x

II. Australian Operators

- Australian casinos are comparable in size to those in Las Vegas and Macau
- There are only three publicly held land based gaming companies in this region
- There is a limited regulatory risk because there are limited licenses
- For example there is only one casino in Melbourne, the most populous city
- Valuations are between 9.0x-12.0x

III. US Regional Operators

- Companies in this category tend to operate multiple smaller properties often in limited license markets
- Lower valuation reflects smaller capital investment and often higher financial leverage (especially operators leasing real estate from gaming REIT's) thereby increasing equity risks to investors
- These markets depend on a lower value local customer then Las Vegas which depends on destination customer
- Valuations are supported by greater diversification as these companies tend to have assets in multiple jurisdictions
- Valuations are between 6.5x – 9.0x

IV. US Microcap Operators

- Lower valuation relates to small size and capitalization of the owners of these casinos
- Small regional casinos are most vulnerable to local market volatility
- Subject to limited liquidity as many investors are restricted from microcap investing
- Valuations are between 4.5x-6.5x

V. Emerging Markets Operators

- Casinos located in jurisdictions with short gaming history and limited regulation
- Regions include tertiary Asian markets and Latin America
- Gaming regulation is limited and is often not enforced; there are concerns of corruption
- Often, casinos in these regions depend on patrons ability to cross the border with cash
- Valuations are between 4.0x-6.0x

On the next page we illustrate valuation multiples for gaming companies in each of the five geographic categories.
